

Regent's policy statement on sustainability

The Regent Group, headquartered in Basel, consists of the organizations Regent Lighting Europe, Regent Lighting Asia and RD Leuchten. Regent employs over 600 people in six countries in Europe and Asia and is a renowned lighting manufacturer in Europe and India as well as a leading supplier in Switzerland. Lighting solutions are sold internationally in 35 countries through its own sales companies and distribution partners. Thanks to its holistic expertise, Regent offers orientation in the luminaire market, which is in a state of upheaval due to the use of LEDs and forward-looking digital technologies and offers many opportunities. Top motivated employees develop first-class semiconductor-based optoelectronic lighting systems and research digital innovations in order to offer the market smart solutions in the field of connected lighting. Regent products already incorporate the digital technologies of tomorrow.

At the Regent Group, we work to become better everyday. It is our personal and lived conviction that we are committed to a better world and a caring society. Regent is guided by the principles of sustainability. In order to meet our responsibility towards future generations, we ensure that our products, services and processes are in line with sustainable ecological, economic and social development and are always state of the art.

Our commitment to this goes beyond our products. We strive to permeate our entire value chain and bring about positive change. For example, EcoVadis supports us in this endeavor, enabling us to achieve our sustainability goals and maximize our positive impact on the world. Our bronze-level certification demonstrates our progress as we continue to strive to steadily improve our performance.

For years, for example, we have relied exclusively on renewable energies at our main site in Basel. This decision, long before the topic was in all the media, reflects our commitment to a low-carbon future and is another step towards our goal of minimizing our environmental footprint. Our new NEO floor lamp, with its state-of-the-art LED technology, is also a shining example of our commitment to providing energy-efficient solutions. With up to 80% less energy consumption compared to conventional luminaires, it makes a significant contribution to CO₂ reduction. We are proud that quality and sustainability are embedded in the DNA of our products.

The ideals of sustainability and circular design inspire us to continuously innovate. Our expectations of and commitment to sustainability are set out in the Code of Conduct for employees and the Code of Conduct for our suppliers. Our employees, our supplier partners, and our customers all contribute to shaping a better world.
